

United States of America  
President Mr. Donald J. Trump

**Protest against the subcritical nuclear test  
Call for immediate termination of all nuclear related experiments and development plans**

The country's Lawrence Livermore National Laboratory has carried out a subcritical nuclear test without nuclear explosions on February 13 at a test site in Western Nevada in order to increase the safety of its storing nuclear warheads. It clarified on May 24th. Your country's subcritical nuclear tests have been conducted 29 times since December 2017.

As a doctor and dentist living in Japan, particularly in A-bombed area Japan, the only country that is exposed to radiation, it strongly protests your country's outrage. In the medium-term nuclear strategy guidelines of February 2018, you indicated the possession of an "easy-to-use nuclear" such as the development of small nuclear weapons to counter Russia and China. It is causing disappointment and anger to those in the world who seek the abolition of nuclear weapons and peace.

Especially in A-bombed countries Japan, we have felt a sense of crisis about changes in your nuclear strategy in your country, but this subcritical nuclear test and the announcement as if you were in Japan I can not but say.

We repeatedly seek for the sincere implementation of nuclear disarmament in line with the Nuclear Non-Proliferation Treaty (NPT) and the cessation of nuclear weapons performance experiments, and strongly urge the immediate cessation of all nuclear related experiments and nuclear weapons development.
